Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         in a variety of immunoassays.
C;Comment: This peptide was isolated in two forms. One form contained the pyrrolidone car C;Comment: This peptide beat isolated in two forms a large, non-peptide blocking group with a hig c;Superfamily: thymic factor
C;Keywords: blocked amino end; pyroglutamic acid
F;1/Modified site: pyrrolidone carboxylic acid (Gix) (in FTS) #status experimental
F;1/Modified site: blocked amino end (Glx) (in thymocyte growth peptide) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                         a peptide isolated from pig serun
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A,Molecule type: protein

(ANTI-) ANTIALIS SARL.

Trehin Y; Terrasse G, Loria E,

WPI; 2002-750636/81.

Antiallergic compositions containing an anti-histamine, a histamine synthesis inhibitor, and optionally an allergen or nucleic acid coding for the allergen.

Claim 14; Page 11; 32pp; French.

The invention relates to antiallergic compositions containing an anti-histamine, a histamine synthesis inhibitor, and optionally an allergen or histamine acid molecule that has at least one polymucleotide sequence coding for the allergen, together with a pharmaceutical carrier. The pharmaceutical composition of the invention is useful as a non-specific antiallergic treatment, and also useful in the treatment of allergic hypersensitivity, allergic asthma, allergic rathmitis, and allergic asthma, allergic asthma, allergic asthma the sequence represents a peptide of a cysteine protease epitope region relating to the antiallergic

The sequences given in AAR77350-53 are peptides derived from the canonical Haemonchus contortus cysteine proteinase molecule which were used in the design of the primers given in AAQ94240-43. These primers were used in the cloning of CDNA fragments from the cysteine protienase gene, such as DM.1, DM.2, DM.3, DM.4, DM.4a and DM.5 (see also AAQ94246-51). The amplified fragments may be expressed in a recombinant cell for the production of antigens. These antigens may be used in the preparation of a vaccine against helminth parasites in a human or non-human animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protective helminth parasite antigen - used in vaccine directed against parasitic nematodes of mammalian gastro-intestinal tract e.g. Haemonchus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                dihydropyridine/pyridinium salt type redox moiety; retina; lipophilic; antidiabetic; ophthalmological; diabetic retinopathy; growth factor inhibitory activity; somatostanin; somatostatin analogue; octrectide; lanreotide; sequential metabolism;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to an antiallergic pharmaceutical composition (1) comprising a pharmaceutical carrier containing an active agent combination of at least two of: an allergen; an antihistemanne; and a histemanine synthesis inhibitor. (1) is used for treating or preventing allergic hypersensitivity reactions, especially allergic asthma, allergic rhinitis or allergic cacema, in babies, children or adults. The present sequence is a peptide fragment (epitope) of cysteine protease from Dermatophagoides pteronyssinus, which was used as an allergen in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antiallergic composition, useful for preventing and treating e.g. asthma, rhinitis or eczema, containing at least two of allergen, antihistamine and histamine synthesis inhibitor.

```
the retina, a bulky lipophilic function and an amino acidy dropyridine/pyridinium salt type redox moiety for targening age to the retina, a bulky lipophilic function and an amino acidy dropyridine/pyridinium salt type redox moiety for targeting peptides to the retina, a bulky lipophilic function and an amino acidy driperide/tripephide spacer. Also described: (1) the preparation of (1); and (2) intermediate quaternary salts (11). (1) have antidiabetic and ophthalmological activities. (1) can be used in the treatment or prevention of diabetic retinopathy by delivery of peptides with growth actor inhibitory activity (e.g. somatostatin analogues such as cerrectide and lanreotide) to the retina by sequential metabolism. It is envisaged that (1) will be useful in the treatment of insulin dependent diabetes mellitus patients for critical periods in diabetic retinopathy disease progression before laser photocoagulation is indicated, preferably for 1-4 month intervals when a patient is experiencing severe comproliferative diabetic retinopathy or is found to have low risk diabetic retinopathy. The present sequence represents a somatostatin analogue peptide, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Polylinker peptide #3 relating to invention of M. tuberculosis antigens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           peptide derivatives with redox targetor moiety are useful in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes peptide derivatives (I) comprising a dihydropyridine/pyridinium salt type redox moiety for targeting peptides to the retina, a bulky lipophilic function and an amino cot the retina, a bulky lipophilic function and an amino cot didpeptide/tripeptide spacer. Also described: (I) the preparation of (I); and (2) intermediate quaternary salts (II). (I) have antidiabetic and ophthalmological activities. (I) can be used in the treatment or prevention of diabetic retinopathy by delivery of peptides with growth factor inhibitory activity (e.g. somatostatin analogues such as octreotide and lanreotide) to the retina by sequential metabolism. It is envisaged that (I) will be useful in the treatment of insulin dependent diabetes mellitus patients for critical periods in diabetic retinopathy disease progression before laser photocoagulation is indicated, preferably for 1-4 month intervals when a patient is experiencing severe con-proliferative diabetic retinopathy or is found to have low risk diabetic retinopathy. The present sequence represents a somatostatin analogue peptide, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              dihydropyridine/pyridinium salt type redox moiety; retina; lipophilic; antidiabetic; ophthalmological; diabetic retinopathy; growth factor inhibitory activity; somatostatin; somatostatin analogue; octreotide; lanreotide; sequential metabolism; insulin dependent diabetes mellitus.

The present invention relates to fusion proteins of Mycobacterium tuberculosis antigens, and the polynucleotide sequences encoding them. The sequences of the invention are useful in a method for preventing tuberculosis by administering to a subject an amount of the fusion protein or the polynucleotide that encodes the fusion protein. Also disclosed is a pharmaceutical composition comprising the fusion protein or the polynucleotide sequence encoding it. The fusion protein induces an immune response to M. tuberculosis and can be used in the diagnosis, prevention, and treatment of tuberculosis infection. The present sequence represents a flexible polylinker peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   dihydropyridine/pyridinium salt type redox moiety; retina; lipophilic; antidiabetic; ophthalmological; diabetic retinopathy; growth factor inhibitory activity; somatostatin; somatostatin analogue; octreotide; lanreotide; sequential metabolism; insulin dependent diabetes mellitus.
                                                                         New fusion proteins of Mycobacterium tuberculosis for diagnosing, preventing or treating tuberculosis infection or in enhancing immune responses in M. tuberculosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                         59.0%; Score 36; DB 7; Length 9; 83.3%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of polynucleotide sequences encoding Mycobacterium tuberculosis antigenic polygeptides. The polynucleotide sequences of the invention are useful for treating, preventing, and diagnosing M. tuberculosis infection, for producing M. tuberculosis infection, for producing M. tuberculosis infection, for producing M. tuberculosis secretory polypeptides, for producing DNA vaccines, for presence of bacteria in a biological sample, for inducing and/or senancing immune responses to M tuberculosis, and in gene therapy. ABUS5719-ABUS5718 represent flexible polylinker peptides. Note: The present sequence is given in the Sequence listing but is not mentioned elsewhere in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             M. tuberculosis fusion protein associated flexible polylinker peptide #2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                             Novel isolated mycobacterial polynucleotide, useful for treating, preventing or diagnosing Mycobacterium tuberculosis infection, for producing Mycobacterium tuberculosis secretory polypeptides and DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Fusion protein; Mycobacterium tuberculosis antigen;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠે
                                                                        dhydropyridine/pyridinium salt type redox moiety for targeting peptides to the retina, a bulky lipophilic function and an amino acidid-furipeptide spacer. Also described: (1) the preparation of (1); and (2) intermediate quaterners (11). (1) have antidiabetic prevention of diabetic retinopathy by delivery of peptides with growth factor inhibitory activity (e.g. somatoclarin analogues such as octreotide and lanreotide) to the retina by sequential metabolism. It is correctide and lanreotide) to the retina by sequential metabolism. It is correctide and lanreotide to the retina by sequential metabolism. It is correctide and lanreotide to the retina by sequential metabolism. It is correctide and lanreotide to the retina by sequential metabolism. It is diabetes mellitus patients for critical periods in diabetic retinopathy disease progression before laser photocoagulation is indicated, preferably for 1-4 month intervals when a patient is experiencing severe con-proliferative diabetic retinopathy or is found to have low risk diabetic retinopathy. The present sequence represents a somatostatin analogue peptide, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to the identification of complementary peptides by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying complementary peptides by analysis of protein and nucleotide sequence databases, useful in drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Saccharomyces cerevisiae; complementary peptide; peptide identification;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a calpain partial peptide. Calpain is a human leukocyte derived calcium dependent cysteine protease, which can be used to screen for compounds that activate or inhibit its proteolytic activity. Calpain DNA can be used to treat or prevent cancer, cerebral appplexy, cerebral infarction, substrachnoid haemorrhage, Alzheimer's disease, myodystrophy, cataracte, ischaemic heart disease, athritis or collagen disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human calpain protein and related DNA - useful for drug screening and

polymucleotides encoding the polymentide and the recombinant process to produce the polymentide. The present invention also discloses the method of applying the medicine composite of the polymention in treating liver preparation process of HCCA1 protein specific antibody and its application in diagnosing and treating diseases. The present invention also discloses the application of the application of the polymucleotides encoding the new HCCA1 protein. The present invention also discloses the application of the polymucleotides encoding the new HCCA1 protein. The present sequence represents a peptide sequence relating to human HCCA1 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Polylinker peptide #2 relating to invention of M. tuberculosis antigens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides a number of peptide nucleic acids (PNAs) capable of binding to a cell surface receptor, where the oligomer and the peptide are linked by a chemical bond or an amino acid linker. The oligomer may have a polyamide, polythicamide, polysulfinamide or polysulfonamide backbone. The PNAs of the invention can be used in therapy, including the treatment of infections, cancer, autoimmune diseases, renal failure, endocrinological disorders, acromegaly, neurological diseases and sickle cell anaemia. The present sequence is an example of a peptide for use in a PNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel conjugate, useful for killing pathogenic organisms and for inhibiting gene expression, comprising a peptide nucleic acid oligomer conjugated to ligand capable of binding to a cell surface receptor via chemical bond or linker.
                                                                                                                                                               Peptide nucleic acid; PNA; therapy; infection; cancer; restenosis; asthma; autoimmune disorder; endocrinological disorder; renal failure; neurological disease; acromegaly; sickle cell anaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .;

                                                                                                                                                                                                                                                                              ö
                                                                                                         The present invention relates to the isolation of polymucleotide sequences encoding Mycobacterium tuberculosis antiganic polypeptides. The polymucleotide sequences of the invention are useful for treating, preventing, and diagnosing M tuberculosis infection, for producing M tuberculosis secretory polypeptides, for producing DNA vaccines, for diagnostic purposes, as molecular probes or primers to detect the presence of bacteria in a biological sample, for inducing and/or enhancing immune responses to M. tuberculosis, and in gene therapy. BMIS5749-ABUS5754 represent flexible polylinker peptides. Note: The present sequence is given in the Sequence listing but is not mentioned elsewhere in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                    M. tuberculosis fusion protein associated flexible polylinker peptide #1.
                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New fusion proteins of Mycobacterium tuberculosis for diagnosing, preventing or treating tuberculosis infection or in enhancing immune responses in M. tuberculosis.
                                      Novel isolated mycobacterial polynucleotide, useful for treating, preventing or diagnosing Mycobacterium tuberculosis infection, for producing Mycobacterium tuberculosis secretory polypeptides and DNA
                                                                                                                                                                                                                                                                              ö

The present invention relates to fusion proteins of Mycobacterium tuberculosis antigens, and the polynucleotide sequences encoding them. The sequences of the invention are useful in a method for preventing tuberculosis by administering to a subject an amount of the fusion protein or the polynucleotide that encodes the fusion protein. Also disclosed is a pharmaceutical composition comprising the fusion protein or the polynucleotide sequence encoding it. The fusion protein induces an immune response to M. tuberculosis and can be used in the diagnosis, prevention, and treatment of tuberculosis infection. The present sequence represents a flexible polylinker peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /label= OTHER

WPI; 2001-342005/36.

Novel conjugate, useful for killing pathogenic organisms and for inhibiting gene expression, comprising a peptide nucleic acid oligomer conjugated to ligand capable of binding to a cell surface receptor via a chemical bond or linker.

Claim 14; Col 19; 25pp; English.

The present invention provides a number of peptide nucleic acids (PNAs) capable of binding to a call surface receptor, where the oligomer and the peptide are linked by a chemical bond or an amino acid linker. The oligomer may have a polyamide, polythicamide, polysulfinamide or polysulfonamide backbone. The PNAs of the invention can be used in therapy, including the treatment of infections, cancer, autoimmune diseases, renal failure, endocrinological disorders, acromegaly, neurological diseases and sickle cell anaemia. The present sequence is an example of a peptide for use in a PNA

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                           May 19, 2005, 17:53:34 ; Search time 29.5 Seconds (without alignments) 25.305 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 62, Application US/09144991B

Patent No. 6440933

GENERAL INFORMATION:
APPLICANT: BODOR, Nicholas Stephen
APPLICANT: BARTOLOMEO, Maria
TITLE OF INVENTION:
TITLE OF INVENTION: OF DIABETIC RETINOPATHY
TITLE OF INVENTION: OS 028724-109
CURRENT PAPLICATION NUMBER: US/09/144,991B
CURRENT FILING DATE: 1998-09-01
PRIOR APPLICATION NUMBER: US 60/058,423
PRIOR FILING DATE: 1997-09-10
NUMBER OF SEQ ID NOS: 65
SOFTWARE: PACENTIN VOE: 2.0
SEQ ID NO 62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
TITLE OF INVENTION: COMPOUNDS AND METHOD FOR THE PREVENTION AND TREATMENT TITLE OF INVENTION: OF DIABETIC RETINOPATHY

                                                                                                                                                                                                                                                                                                                                                                                                                                                              NAME/KEY: DISULFIDE
LOCATION: (3)..(6)
OTHER INFORMATION: Cysteine residues at positions 3 and 6 are
OTHER INFORMATION: attached by a non-peptidal disulfide bond.
OTHER INFORMATION: Description of Unknown Organism:peptide derivative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          LOCATION: (3)..(6)
LOCATION: (3)..(6)
OTHER INFORMATION: Cysteine residues at positions 3 and 6 are
OTHER INFORMATION: attached by a non-peptidal disulfide bond.
OTHER INFORMATION: Description of Unknown Organism:peptide derivative

neuropeptide Led-CC-I - Colorado potato beetle
C;Species: Leptinotarsa decemlineata (Colorado potato beetle)
C;Date: 30-Sep-1993 #sequence_revision 30-Sep-1993 #text_change 09-Jul-2004
C;Accession: A44960
R;Gaede, G.; Kellner, R.
Peptides 10, 1287-1289, 1989
A;Title: The metabolic neuropeptides of the corpus cardiacum from the potato beetle and A;Reference number: A44960; MUID:90160053; PMID:2576128
A;Accession: A44960
A;Abolecule type: protein
A;Residues: 1-8 cAAE
A;Cross-references: UNIPROT:P04548
C;Superfamily: adipokinetic hormone
C;Superfamily: adipokinetic hormone
C;Superfamily: adipokinetic hormone
C;Keywords: blocked carboxyl end; corpora cardiaca; hormone; neuropeptide; pyroglutamic
F;I/Modified site: pyrolidone carboxylic acid (Gln) #status experimental
F;8/Modified site: blocked carboxyl end (Trp) (probably amidated) #status experimental
